

## Summary

My goal for this project is to redesign and update my dad's website for his small business. He recently mentioned that he wanted to make it more attractive and mobile-friendly, as they have not updated it in a few years. I think that changing the tone of the website to look sleeker and more modern will help to accomplish this. The website currently looks a little dated and the color palette is not very cohesive.

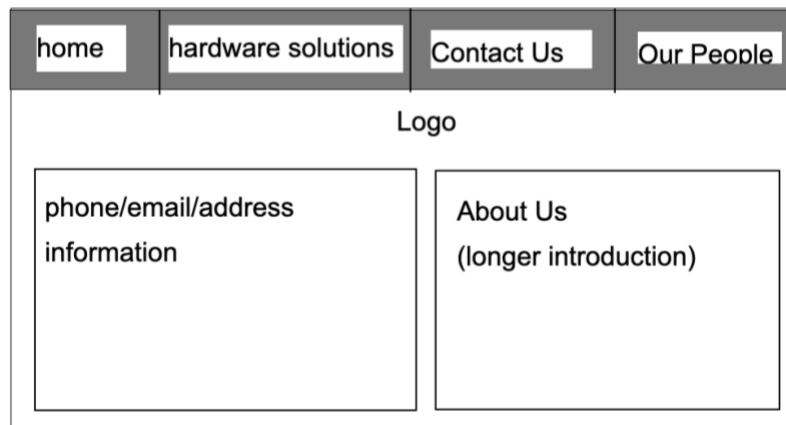

In order to improve the general cohesiveness of the website's appearance, I will stick to mostly using the colors in the company's logo for my color palette. This will create a monochromatic color scheme of dark blue, black, white, and grey. The current use of colors detracts from the website looking like a single unit.

I will make the website more mobile-friendly by making any menus collapsible and pictures resizing when the size of the browser changes. I also want to add a form under the contact section so that customers can submit questions directly on the website.
